

Carte cromatografiche, Whatman 3MM CHR

Pure cellulose produced entirely from the highest quality cotton linters with no additives of any kind.

Ensures that no contamination will occur during the transfer steps.

Manufactured and tested specifically for chromatographic and blotting techniques. This ensures the wicking capability and uniformity of capillary action that are important in obtaining clean and even transfers during blotting.

Whatman 3MM Chr is considered the industry standard for blotting procedures.

Convenient sizes available in sheets precisely cut to the most popular gel and transfer membrane sizes. Allows "out-of-the-box" usage and eliminates sheet-to-sheet variations.

3MM Chr is also used both in electrophoresis and for general chemistry. A medium thickness paper (0.34 mm) used extensively for general chromatography and electrophoresis.
